EDUCATION

Villanova University – College of Engineering, Villanova, PA *May 2028*

Bachelor of Science in Mechanical Engineering | Minors: Mechatronics, Entrepreneurship

- Courses: Solid Mechanics and Design, Dynamics II, Circuits, Heat Transfer, Fluid Mechanics
- GPA: 3.74

ENGINEERING AND ENTREPRENUERSHIP

Combat Robotics – Villanova University *January 2025 – Present*

(3lb Vertical-Spinner Team Lead and Driver)

- Led a 9-member team through the design, fabrication, assembly, integration, and competition preparation of FREEDOM, one of Villanova's first 3-lb combat robots to compete at the National Havoc Robot League (NHRL).
- Coordinate mechanical and electrical subsystem development, including SolidWorks design iterations, component selection, weight-budget management, fabrication, and system integration while delegating responsibilities and managing project deadlines.
- Collaborate across drivetrain, chassis, electronics, and rotating-system teams to resolve design tradeoffs involving weight, packaging, reliability, and manufacturability within the 3-lb competition constraint.

Engineering Entrepreneurship Summer Institute (E2SI) - Ireland *Summer 2026*

(8-week accelerated course with 3 weeks of classes abroad)

- Collaborated on an interdisciplinary team of 3 to develop LimbLet, a wearable sensor concept supporting preventive care for aging populations, progressing from initial ideation to a venture pitch.
- Evaluated global innovation and sustainable business practices while in Ireland, incorporating recyclable materials and circular-economy principles into the product concept.

Mechanical Engineering Analysis and Design Class – Villanova University August *2025 – December 2025*

(Lead Project Designer and Driver)

- Designed and wired the control system for a semester-long combat robot project and served as the driver for my 3-person team in competition, defeating two competing robots
- Completed laboratory projects involving torque, projectile motion, hydraulic systems, robotic arms, gears, motors, and engine disassembly

Composite Technology and Infrastructure – Coeymans, NY *Summer 2024/Summer 2025*

(Engineering intern)

- Designed and fabricated a custom roller that doubled efficiency cutting fiberglass and continues to help the company today
- Independently researched information about the valves and grouting needed to assist a team in making 10 technical submittals for a government boiler project
- Collaborated with 4 team members to load 3+ truckloads of shipments daily for projects
- Assisted in repairing machines for sites using power drills and saws

LEADERSHIP

Villanova University Club Robotics *August 2026 – Present*

(Co-President)

- Co-manage an organization with 100+ students in weekly competition preparation meetings and robotics events
- Organize an executive board of 10 to handle club operations effectively
- Secured $30,000 in funding through sponsorship outreach and through the university

TECHNICAL SKILLS

- **3D Modeling-** SolidWorks – Autodesk Inventor
- **Programming/Analysis-** MATLAB – Maple – Microsoft Excel
- **Engineering Fabrication-** 3D Printing – Soldering – Manual Milling

ADDITIONAL ACTIVITIES

Villanova Community Action for New Engineers *September 2024 – Present*

- Teaching children in schools about engineering with activities designed to be fun and engaging

Villanova University Club Running *January 2025 – Present*

- Training 3 times per week for races and meets, working together with teammates to train and improving times

Scouts of America *June 2018 – September 2023*

- Achieved the highest rank of Eagle Scout and led a sign building community project
